2019 APPAM Fall Research Conference
Rising to the Challenge: Engaging Diverse Perspectives on Issues and Evidence
November 9 - 11, 2019
Denver, CO

The 2019 APPAM Fall Research Conference will celebrate APPAM's 41st conference on November 7-9 at the Denver Sheraton in Denver, Colorado. This year's event will focus on celebrating differences among all viewpoints and how we can work together to improve the public policy field.

The current political context underscores the value of bringing together researchers and practitioners with a wide range of perspectives to engage the evidence and discuss how best to improve public policy. It is our hope that the conference theme, *Rising to the Challenge: Engaging Diverse Perspectives on Issues and Evidence*, will encourage a conference with conversations that reach across disciplinary, methodological and ideological divides. Proposals are now being accepted in [15 policy areas](#).

We are soliciting abstracts for (1) individual papers to be integrated into panels, (2) panels made up of 3-4 papers, (3) roundtables, (4) super sessions and (5) posters. Abstracts for individual papers and posters should be no more than 500 words; if a panel of papers is proposed, there should be a summary of each paper plus an overarching description of the panel and its importance. Descriptions for roundtables and super sessions should be no more than 500 words, plus a listing of participants and a summary of their contributions. For more information on submission types, please visit the [APPAM website](#).

Title: Panel Title Final Test
Policy Area: Family and Child Policy
Description: This presentation will demonstrate how data from multiple administrative sources can be used to retrospectively assess program impacts, providing credible findings to inform program and policy decisions. Although the study is not based on a prospective randomized experiment, we obtain credible impact estimates by leveraging a natural experiment, employing two comparison groups, and using administrative data to construct both proximal and distal outcomes aligned with the program's logic model.
